Reviews

The book is fantastic and great. It normally will not cost an excessive amount of. I am just easily could possibly get a satisfaction of reading a published ebook.

(Edgar Witting)

Brand New Book ***** Print on Demand *****.This historic book may have numerous typos and missing text. Purchasers can usually download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1920 edition. Excerpt: .tertian plasmodia. The girl had 11 worms; hemoglobin, 67 ; spleen, 2 fb. below umbilicus; blood showed polychromasia but no plasmodia at the time Fig. 69.--A prolific breeding place in brackish water for the anophelines which spread malaria in the kampongs of Batavia near the sea Fig. 70.--Corre1ation between incidence of malaria infection and distance from the sea. Spleen rates vary inversely with the distance In Kalimaro, Kebasekan, and Krakal, on the other hand, there was little or no malaria, and the worm counts were high--Kalimaro 197.5 and Kebasekan 168.0 per person. These figures are about three or four times as high as those obtained in the malarious dessas, and the number of persons with palpable or enlarged spleens was too small for the data to afford any basis for an estimate as to the possible influence of one infection on the other. The figures obtained in Batavia kampongs and in the jail, however, perhaps furnish some basis for comparison. The entire city may be regarded as urban, although, as explained elsewhere, the natives live in their karnpongs within the city limits. In the city there is less soil pollution, however, than in the strictly rural districts. Near the sea there is severe malaria, but the incidence diminishes as the distance from the sea increases. It is therefore possible to compare the incidence of hookworm infection and of malaria in the four kampongs. The figures of such a comparison are shown in Table 41,...
